Table 4 Statistical data of patients. Despite the large gains  
in outcomes among patients with heart failure, it remains a  
relentlessly progressive disease for. The proposed system is  
designed to send alarm message immediately after getting  
arrhythmia. Checktheelectionresults. Patients should  
understand that in the event that any device replacement may  
be indicated, there will again be discussion regarding the  
balance of benefits and risks, and the patient could opt to  
decline replacement, even if advised by the medical team.  
Turning off ICDs and turning off VADs in response to patient  
or proxy requests are legally the same although they may be  
perceived differently, as disconnection of the VAD is more  
likely to cause immediate death.

AnnalsThoracicSury[PubMed].Areviewofwearablesensorsandsystemswith  
recommended that ideal time in between sudden fall or rise in  
cardiac vital signs and sending an alarm message to  
cardiologist is in between 4 to 6 minutes which is called the  
golden period of saving a heart patient.
