Ecological monitoring at these occurrence margins, or ecotones, should allow more rapid detection of change and mitigation actions. An important consequence of repeated, random clearing whether by natural disturbance or human activity is that contiguous cover can break down into isolated patches. The following ecotone classification was suggested to differentiate the ecotones according to the type of environmental stress and biological interactions that forms the ecotone.

The ecotone in this case can be classified as hydro-ecotone because the water... Additional info for Ecotones: The low winter temperatures decreased of the evaporation rate. Abstract Ecotone is not just a transition zone between two adjacent ecosystems. Nowadays the ecotone is considered one of the most important subjects in ecology.
