Some of the concepts in the book, which are considered by some to be basic and foundational to modern physics, are truly fascinating to ponder. I learned a lot from this book, and more from the research to make sense of it. If a body is experiencing an accelerating force it therefore experiences the universe differently from one that is experiencing a lesser force.

I think this book could have been better if they accepted they are rewriting for me. I was expecting, from the first few paragraphs of the book, that I was going to breeze right through. I'm sure it's a breeze for an MIT student, but since it was written for my level of science meaning zero I need more time to wrap my brain around these concepts that are completely new to me because my high school physics teacher lost me from day one and that was a long time ago.
